OBJECTIVE

IT professional with 2 years of relevant experience, specializing in cloud infrastructure and backend development. Possess strong expertise in implementing and managing AWS services and developing scalable solutions using Node.js. Seeking to leverage technical proficiency to contribute to innovative, cloud-based projects in a dynamic environment.

TECHNICAL SKILLS

Programming Language:	JavaScript (Node.js)
AWS:	Lambda, S3, IAM, DynamoDB, API Gateway, SES , SNS SQS, CloudWatch, REST API
IaC:	CloudFormation, Serverless
CI/CD Services:	CodePipeline, CodeBuild, CodeCommit, CodeDeploy, Git

EXPERIENCE

Organization:	VAM SECURITIES – Noida, India	Jan 2024 – Present
Designation:	Cloud Engineer & Backend Developer	

- Developed and maintained backend APIs using Node.js integrated with AWS Lambda via the Serverless Framework.
- Designed and implemented RESTful APIs behind API Gateway, enabling real-time financial data handling.
- Managed and optimized NoSQL databases using Amazon DynamoDB, including query performance tuning.
- Configured IAM roles/policies for secure access to AWS resources.
- Deployed and maintained static content and file storage with Amazon S3.
- Integrated CloudWatch for logging and monitoring, ensuring system reliability.
- Collaborated with frontend and design teams to align product behavior with business logic.

Key Projects:

1. Serverless Payment Processing System

- Developed a serverless payment gateway backend to handle secure transactions, refunds, and payment confirmations.
- Used AWS Lambda functions for business logic and API Gateway for routing RESTful requests.
- Stored and indexed transaction data in DynamoDB with optimized query patterns.
- Configured IAM policies for granular access control and data protection.
- Uploaded digital receipts and transaction logs to Amazon S3, enabling customer and admin access.
- **Tech Stack:** Node.js, AWS Lambda, API Gateway, DynamoDB, IAM, S3.

2. User Authentication & Authorization Microservice

- Developed a microservice for secure user login, registration, token-based authentication, and role-based access.
- Implemented JWT-based authentication and built REST APIs with Node.js and API Gateway.

- Created middleware to handle token verification and route protection.
- Stored user metadata in DynamoDB, using hashed credentials and secured fields.
- Managed secure deployment using IAM policies and monitored login patterns via CloudWatch Logs.
- **Tech Stack:** Node.js, JWT, AWS Lambda, API Gateway, IAM.

EDUCATION

Bachelor of Technology

Dr. A.P.J. Abdul Kalam Technical University

Agra, UP

- **Computer Science and Engineering**
- Completed: 2023
